buttons!

Information:

This is a layout for a machine cut vinyl sticker that is applied on a pre-cut cardboard retail box. The tabs can be used to display pinned back buttons. The tabs are optional. You can choose to use some and cover the others with the solid vinyl.

In this example, we would not cut the top 3 tabs, leaving only the bottom 6 cut out for button display.

The paths in this file show the machine where to cut the stickers. Please do not flatten or delete them.

Save an AI or PDF file without moving or modifying the cut paths for the best results.

If you have any questions, please email info@buttonmakers.net

Thank you!
